**Introduction.** Landscaping and recreation areas of large cities create a kind of landscaping and open spaces for various purposes [1]. Recently, special attention has been paid to the improvement of the territories of urban parks and their transformation into thematic areas of recreation, entertainment, etc.

**Formulation of the problem.** Kadetskiy Hai Park is located on the historical site of the Solomenskiy district of Kyiv, but the organization of its territory does little to confirm this.

During the development of pre-project proposals for the reorganization of the territory, it was decided to focus on military issues so that people would pay attention and remember our ancestors who had done so much for us.

**Main part.** The park area is 27.4 hectares, has a difficult relief, the height difference reaches 14 m. The park has two entrances on the street. Cadet Grove and Str. Ivan Pulyuya, which allows you to organize equal access to different designated areas. In particular, meet the needs of visitors of different ages.

At the entrance (east) it is proposed to place a thematic gallery, the exposures of which will change several times during the year.

On the other side of this entrance, there will be a health station and directly behind it, on the slope, will begin the area for teenagers with cable cars.

The sports area below the relief will include a sports equipment dispensing area for everyone; a basketball court with a spectator area, a treadmill around the court; tennis court and ping pong tables.

It is planned to build the Chaika cafe for 50 visitors, beyond which the relief steps will be located on the slope in front of the screen of the summer cinema. The latter's repertoire includes children's cartoons and films on Cossack and military topics. Separate playgrounds will be organized for children of all ages, as was the case during the Cossacks.

The interior of the cafe is designed to create an appropriate atmosphere in the Cossacks during the use of national symbols, ornaments, etc. In the quiet area arbors will be created - prototypes of Cossack huts inhabited by Cossacks in Ukraine, and monuments and fountains will decorate the images of real Cossacks.

Parking spaces for private vehicles are planned to be placed at the second entrance.

It is planned to arrange ramps, a lift with landing sites located on the lower and upper sections of difficult terrain for representatives of small-mobile population groups in the territory of the park; Appropriate equipment for sports, recreation, etc.

[2]. The organization of places for permanent workers is envisaged for servicing the elevator and providing assistance to visitors.

A system of paths, alleys, cycle paths with appropriate coverage and elements of artificial lighting will be organized in the park.

Separate areas with appropriate enclosures are also provided for people with animals.

The amenities include comfortable seating, trash cans, restrooms, and more.

**Conclusion.** The organization and improvement of the park area are focused on its use throughout the year. With appropriate seasonal restrictions on the use of individual zones (skating rink - winter, pin-pong - spring-summer-autumn, etc.), the park should meet the needs of not only residents of residential complexes located nearby, but also guests of the city.
